PRESS & MEDIA KIT 2026

Travel connectivity built around choice

UniSimCard is a global travel eSIM platform designed to help international travelers stay connected without relying exclusively on traditional carrier roaming. Through a combination of a purpose-built website and mobile application, travelers can explore connectivity options for more than 190 destinations — selecting plans that align with where they are going, how long they are traveling, and how much data they expect to use.

The platform accommodates a range of travel styles and data requirements. Depending on the destination, customers can choose between fixed-data packages, unlimited options, country-specific plans, and multi-country regional or global connectivity. UniSimCard is designed around flexibility rather than a one-size-fits-all approach — travelers can make connectivity decisions based on their specific trip rather than being limited to a single type of plan.

UniSimCard is accessible through the main website at **unisimcard.biz** and through the mobile application available at **app.unisimcard.com**. Both the web and app platforms provide access to destination browsing, plan selection and account management.

❏ These figures reflect UniSimCard's current commercial offering. Plan availability and coverage conditions vary by destination.

From destination search to connectivity

UniSimCard is structured around a straightforward process. Travelers begin by identifying where they are going, review the available plan options for that destination, and complete their purchase digitally — receiving their eSIM without a physical SIM card or shipping delay. The steps below outline the typical customer journey from start to connected.

The full process is digital from start to finish. No physical SIM card is required, and installation can be completed before departure on any eSIM-compatible device. The UniSimCard app provides ongoing access to account and connectivity management throughout the trip.

i Plan availability, network availability, data allowances, validity periods and unlimited-plan conditions vary by destination and plan. Travelers are encouraged to review plan details before purchase.

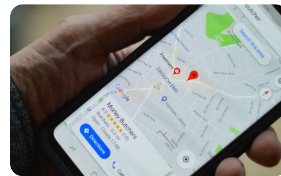

One trip doesn't look like every other trip

UniSimCard's product range is organized around the recognition that different travelers have different connectivity needs. A solo traveler spending a weekend in a single city has different requirements than a business traveler moving between several countries, or a digital nomad with consistently high data demands. Rather than offering a single type of plan, UniSimCard provides distinct product categories so travelers can select connectivity that corresponds to their specific journey.

Country eSIM

For travelers visiting a specific destination. Country eSIMs are available for a wide range of individual markets including Japan, United States, Brazil, Israel and Turkey, among many others.

Fixed Data Plans

Choose a defined data allowance and validity period based on expected usage. Fixed-data plans offer predictability for travelers who prefer to set a clear data budget for their trip.

Unlimited Options

Unlimited-data options are available for selected destinations and plans. Conditions and speed policies vary depending on the selected package. Travelers should review plan-specific terms before purchasing.

Regional & Global

Multi-country connectivity for travelers visiting several destinations during the same trip. Regional options include areas such as Europe, Asia and the Americas. Global options are also available for broad international coverage.

UniSimCard gives travelers the ability to select connectivity according to the trip — rather than requiring every traveler to use the same type of plan regardless of their destination or data needs.

Travel connectivity in your pocket

The UniSimCard experience extends beyond a single eSIM purchase. The UniSimCard mobile application — available for both iOS and Android — provides travelers with a dedicated environment for browsing destinations, reviewing and selecting plans, managing purchased eSIMs and accessing account information throughout a trip.

What the app provides

Through the app, travelers can browse available connectivity options for their destination, compare plans by data allowance and validity, complete purchases and manage their travel connectivity on the go. The application is designed to make the full connectivity workflow — from initial research to active management — accessible from a single mobile interface.

The app is available at **app.unisimcard.com** and through the Apple App Store and Google Play Store. Both platforms provide access to the same core product catalog and account functionality available through the UniSimCard website.

Key App Functions

- **Destination Browsing**
Search and explore connectivity options for 190+ destinations
- **Plan Selection & Purchase**
Compare and purchase fixed-data, unlimited, regional or global plans
- **eSIM & Account Management**
Access purchased eSIMs, review usage information and manage account details

Instead of treating travel connectivity as a one-time purchase, UniSimCard is building an app-based experience that travelers can return to for future trips — maintaining their connectivity history and preferences in a single place.

Available On

The UniSimCard app is available for download on both major mobile platforms.

iOS

Available on the Apple App Store for iPhone and iPad

Android

Available on Google Play for Android devices

Experience UniSimCard yourself

Journalists, travel writers, technology reviewers and established creators interested in evaluating UniSimCard can request complimentary account credit for independent testing during an upcoming international trip. Reviewers use the same UniSimCard platform and connectivity products available to all customers. UniSimCard encourages independent testing and does not require positive coverage or editorial approval in connection with review access.

What can you test?

App Experience

Registration, destination discovery, navigation and overall usability of the UniSimCard web and mobile platforms.

Plan Selection

Compare the connectivity options available for your specific destination, including plan types, data allowances and pricing.

Purchase Experience

Experience the standard UniSimCard purchasing process as a customer, from plan selection through to eSIM delivery.

eSIM Installation

Evaluate the eSIM installation and device setup process on a compatible iOS or Android device before departure.

Connectivity

Test the service during actual international travel and assess real-world performance at your destination.

Support

Evaluate the support experience when assistance is required, including response quality and resolution process.

Request Review Access

Tell us where you're traveling and how you plan to review UniSimCard. Approved media and creator requests may receive complimentary UniSimCard credit appropriate for the planned test. Reach out through the media contact on the following page.

Complimentary review access does not require positive coverage or editorial approval by UniSimCard.

Let's connect

UniSimCard welcomes inquiries from press, media, independent creators and industry partners. Whether you are preparing a product review, writing about travel connectivity, or exploring a partnership opportunity, the appropriate contact channels are listed below.

Press & Media

For interviews, company background information, product questions, fact-checking and review access requests. Members of the press are welcome to reach out with specific questions or coverage inquiries.

Contact: info@unisimcard.biz

Creators & Reviewers

Travel creators, YouTubers, digital nomad publishers and eSIM comparison websites can request access to independently test UniSimCard during upcoming international travel. Review access follows the process described on the previous page.
